Duration	5 mins 34 secs
Grade	**13.00** out of 15.00 (**86.67**%)

Question **1**

Correct

Mark 1.00 out of 1.00

What happens when the element is found in linear search?

a. The search continues until the end of the list
b. The search stops immediately ✓
c. The search starts over from the beginning
d. The search backtracks to find duplicate elements

Question **2**

Correct

Mark 1.00 out of 1.00

What type of search would be most appropriate for finding an element in a list that is frequently updated?

a. Interpolation search
b. Hash search
c. Linear search ✓
d. Binary search

Question **3**

Incorrect

Mark 0.00 out of 1.00

What is the first step in binary search?

a. Compare the target element with the middle element in the list
b. Compare the target element with the first element in the list
c. Divide the list into two equal parts
d. Sort the list ✗

Question **4**

Correct

Mark 1.00 out of 1.00

_____ search takes a sorted/ordered list and divides it in the middle.

a. Hash

b. Binary ✓

c. Both (1) & (3)

d. Linear

Question **5**

Correct

Mark 1.00 out of 1.00

If a list contains 1000 elements, how many comparisons would a binary search typically make in the worst case?

a. 10 ✓

b. 500

c. 1000

d. 100

Question **6**

Correct

Mark 1.00 out of 1.00

Given an array arr = {45,77,89,90,94,99,100} and key = 100; What are the mid values(corresponding array elements) generated in the first and second iterations?

a. 89 and 94

b. 90 and 99 ✓

c. 94 and 99

d. 90 and 100

Question **7**

Incorrect

Mark 0.00 out of 1.00

Which of the following is not the required condition for a binary search algorithm?

a. There should be direct access to the middle element in any sublist

b. The list must be sorted

c. Number values should only be present ✗

Number values should only be present

d. There must be a mechanism to delete and/or insert elements in the list

Question **8**

Correct

Mark 1.00 out of 1.00

What is searching in the context of computer science?

a. Deleting elements from a list
b. Sorting elements in a list
c. Determining whether an element is present in a list ✓
d. Inserting elements into a list

Question **9**

Correct

Mark 1.00 out of 1.00

What is the best-case time complexity of linear search?

a. O(log n)
b. O(n log n)
c. O(1) ✓
d. O👎

Question **10**

Correct

Mark 1.00 out of 1.00

Which of the following best describes the process of a linear search?

a. Dividing the list in half repeatedly
b. Sorting the list before searching
c. Skipping every second element
d. Checking each element sequentially ✓

Question **11**

Correct

Mark 1.00 out of 1.00

In the context of searching, what is a successful search?

a. When the search algorithm finishes
b. When the list contains duplicate elements
c. When the list is sorted
d. When the element is found in the list ✓

Question **12**

Correct

Mark 1.00 out of 1.00

During a linear search, what is the maximum number of comparisons needed to find an element in a list of size n?

- a. n ✓
- b. log n
- c. n-1
- d. n/2

Question **13**

Correct

Mark 1.00 out of 1.00

In which type of search is the list divided into smaller sublists during the search process?

- a. Linear search
- b. Sequential search
- c. Binary search ✓
- d. Hash search

Question **14**

Correct

Mark 1.00 out of 1.00

Given an array arr = {45,77,89,90,94,99,100} and key = 99; what are the mid values(corresponding array elements) in the first and second levels of recursion?

- a. 90 and 94
- b. 89 and 94
- c. 89 and 99
- d. 90 and 99 ✓

Question **15**

Correct

Mark 1.00 out of 1.00

During a binary search, what happens if the target element matches the middle element?

- a. The search continues in the left sublist
- b. The search ends successfully ✓
- c. The list is sorted
- d. The search continues in the right sublist
